The Cummins ISX Engine's unique dual overhead camshaft design delivers high performance and exceptional braking. The first cam drives high-pressure fuel injection for clean, responsive power. The second cam includes a dedicated set of lobes for the operation of the integrated engine brake, in addition to operating the intake and exhaust valves.

A unit injector (UI) is a high pressure integrated direct fuel injection system for diesel engines, combining the injector nozzle and the injection pump in a single component. The plunger pump used is usually driven by a shared camshaft. In a unit injector, the device is usually lubricated and cooled by the fuel itself. High pressure injection delivers power and fuel consumption benefits over ...

Unit injector - Wikipedia

Caterpillar EGR Delete . Though the EGR, or exhaust gas recirculation, system has good intentions, the fact remains that this component can do more harm than good to Caterpillar diesel engines. Fitting to the name, the EGR recirculates exhaust emissions back into the engine through the air intakes.

The Ford V10 is an iron-block, overhead-cam aluminum head with mounted spark plugs. Most of the accessory components are shared with the 5.4L which makes the head easy to repair. But many of the 1997 - 2008 models have a major design flaw in the spark plug threads. The aluminum design expands at a different rate than the steel spark plugs.
