A dual band router gives you more extension slots (ports to connect to) so they aren't fighting over the same data. My recommendation is to upgrade to a dual band router with at least 600 mbps. I currently have a NetGear Dual Band N600 Router and run many wifi enabled devices on it. I had the same problem you are having when I had a single band.

Open a web browser and enter the URL for the Administration interface for the router. This URL may be found in the user manual for the router. For example, various models of Netgear routers use the URL "192.168.1.1" or 192.168.0.1.

How to Locate a Wireless Encryption Key | Techwalla

If you've never chosen an SSID, your router is probably using a default name set up in the factory. Older routers often used their brand names as SSIDs (Linksys, Netgear, Belkin, etc.) but many new devices have unique names. Check the body of the router itself for a sticker with the SSID, which might also be called the network name.

How to Find Your SSID Number | Techwalla

In order to access and manipulate the control settings for the router, you have to use web links. Such as 192.168.1.1 that is usually provided in the user manual of most of the routers. While 192.168.1.1 is the right answer for most of the router brands, there might be other web links too.
