Ivy Mike was the codename given to the first full-scale test of a thermonuclear device, in which part of the explosive yield comes from nuclear fusion. Ivy Mike was detonated on November 1, 1952, by the United States on the island of Elugelab in Enewetak Atoll, in the now independent island nation of the Marshall Islands, as part of Operation Ivy. It was the first full test of the Teller-Ulam ...

Nuclear Electric, Solar Electric, and Nuclear Thermal were ruled out because they are not mature technologies. Storable chemical fuel does not need cryogenic cooling and does not boil off, it is also nicely dense so the fuel tanks are small. But it has a much lower specific impulse. Cryogenic fuel is the opposite.
