Test Driven Development, or TDD, is a code design technique where the programmer writes a test before any production code, and then writes the code that will make that test pass. The idea is that with a tiny bit of assurance from that initial test, the programmer can feel free to refactor and refactor some more to get the cleanest code they ...

To TDD or Not to TDD? There have been many articles written on the pros and cons of test-driven development , where developers are expected to write the tests first, before writing the code to fix ...

How to Test React Components Using Jest - SitePoint

Testing gives confidence in written code. In the context of this article, 'testing' means 'automated testing'. Without automated testing, it is significantly harder to ensure the quality of a web application of significant complexity. Fails caused by automated testing may lead to more bugs in production. In this article, we're going to show how React developers can quickly start ...
